Date

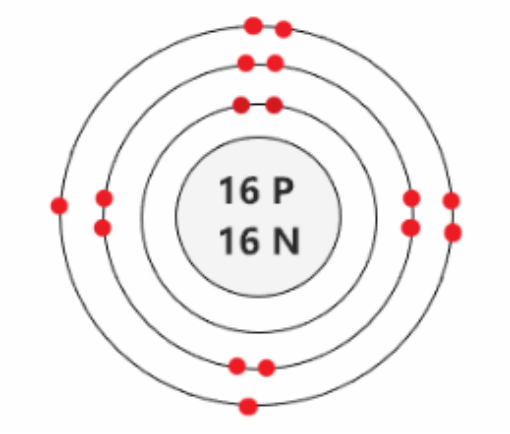
Bonding

Total questions: 20

Worksheet time: 12mins

Instructor name: So Korm

1.



How many valence electrons are shown in the diagram?

a) 6

b) 16

c) 2

d) 7

2. How do covalent bonds form?

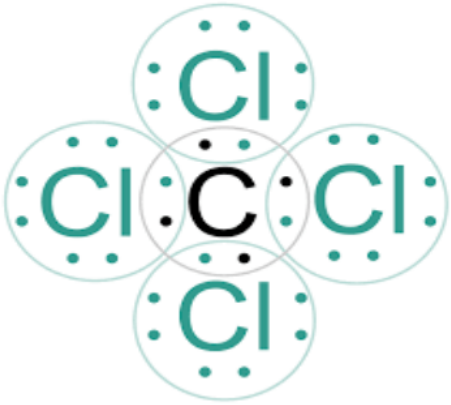
a) Sharing valence e- between atoms.

b) Donating & receiving valence e- between atoms.

c) Opposite slight charges attract each other between compounds.

d) Scientists are still not sure how they form.

3.



Examine the image: How many bonds are formed looking at the model of the compound? And also indetify what type of bond is formed.

a) 4 bonds; metallic
b) 2 bonds; ionic
c) 4 bonds; covalent
d) 2 bonds; covalent

4. Ionic Bonding is the _____ of electron/s between atoms.

a) sharing
b) transfer
c) loose
d) gain

5. a type of covalent bond that shares two pairs of electron

a) single bond
b) double bond
c) triple bond

6. This refers to the tendency of atoms to prefer to have eight electrons in the valence shell

a) Lewis symbol
b) Octet rule
c) Electronegativity
d) Valence electron

7. Electron that is located on the outermost shell

a) electron
b) valence electron
c) neutron
d) proton

8. A bond between metal and non metal is called

a) transfer bond
b) ionic bond
c) metallic bond
d) covalent bond

9. Predict the bond that form between Be and F

a) Ionic

b) Covalent

10. If an atom loses two electrons what charge will it have?

a) +2

b) -2

c) -1

d) +1

11. Which particle is responsible for bonding?

a) Neutrons

b) Nucleus

c) Electrons

d) Protons

12. Which element is most likely to form 2 bonds?

a) Sulfur

b) Nitrogen

c) Carbon

d) Fluorine

13. Why do elements bond?

a) To be friends

b) To create a new element

c) To become stable

d) To get bigger

14. If an atom gains two electrons what charge will it have?

a) -2

b) +1

c) -1

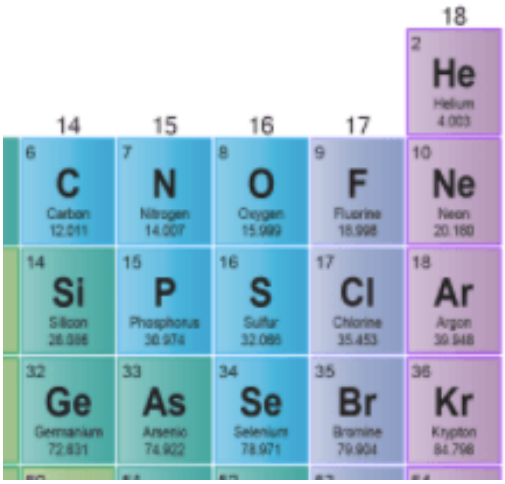
d) +2

15. 
Predict the bond that will form between Se and Cl.

a) Covalent

b) Ionic

16.



How many valence electrons does Oxygen (O) have?

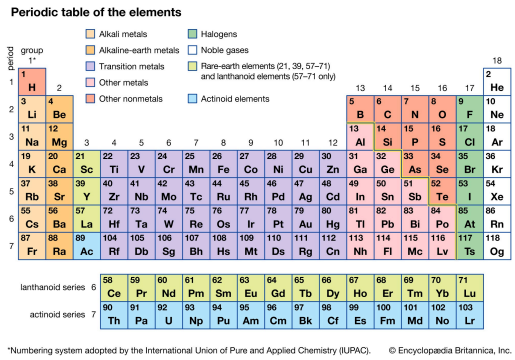
a) 16

b) 15

c) 8

d) 6

17.



Nitrogen will ____ valence electrons when forming an ionic bond.

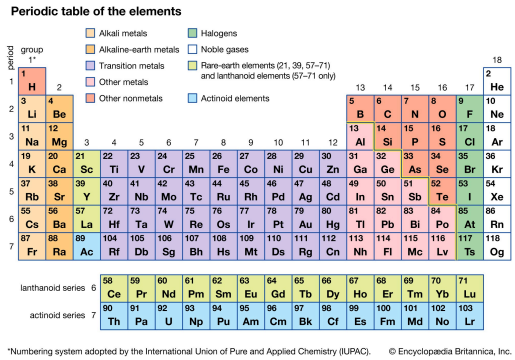
a) gain 3

b) gain 1

c) lose 3

d) lose 1

18.



Beryllium will ____ valence electrons when forming an ionic bond.

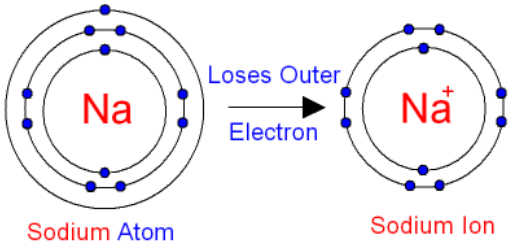
a) lose 2

b) lose 4

c) gain 2

d) gain 4

19.



An atom with a different number of electrons than it should have (more or less) is called an ---

a) ion

b) octet

c) valence electron

d) isotope

20. How many electrons can the first energy level hold?

a) 0

b) 2

c) 8

d) 1

Answer Keys

1. a) 6
2. a) Sharing valence e- between atoms.
3. c) 4 bonds; covalent
4. b) transfer
5. b) double bond
6. b) Octet rule
7. b) valence electron
8. b) ionic bond
9. a) Ionic
10. a) +2
11. c) Electrons
12. a) Sulfur
13. c) To become stable
14. a) -2
15. a) Covalent
16. d) 6
17. a) gain 3
18. a) lose 2
19. a) ion
20. b) 2
