HEAT AND TEMPERATURE

Total questions: 14

Worksheet time: 7mins

Instructor name: So Korm

Name

Class

Date

1. The movement of thermal energy from a warmer object to a cooler object is called:

   a) motion
   b) momentum
   c) temperature
   d) heat

2. Heat transfer occurs:

   a) in many directions
   b) both from warm objects to colder ones and from cold objects to warmer ones
   c) only from warm objects to colder ones
   d) only from cold objects to warmer ones

3. When you touch something that feels cold,

   a) it freezes.
   b) coldness moves from the cold substance into your hand.
   c) heat from your hand moves into the cold substance.
   d) it melts.

4. You're holding hands with your best friend. Your friend's hands are REALLY warm and yours are really cold. After a few minutes, this has changed. How might you explain what happened?

   a) The heat energy from your friend's hand transferred to your hand through conduction.
   b) The cold energy from your hand transferred to your friend's hand through conduction.
   c) The heat energy from your friend's hand transferred to your hand through convection.
   d) The cold energy from your hand transferred to your friend's hand through convection.

5. If two objects have different temperatures, heat will flow from the warmer object to the cooler one UNTIL _____

   a) one reaches a temperature of zero
   b) one runs out of energy
   c) they both have an equal temperature

6.

An instrument that measure and indicates temperature.

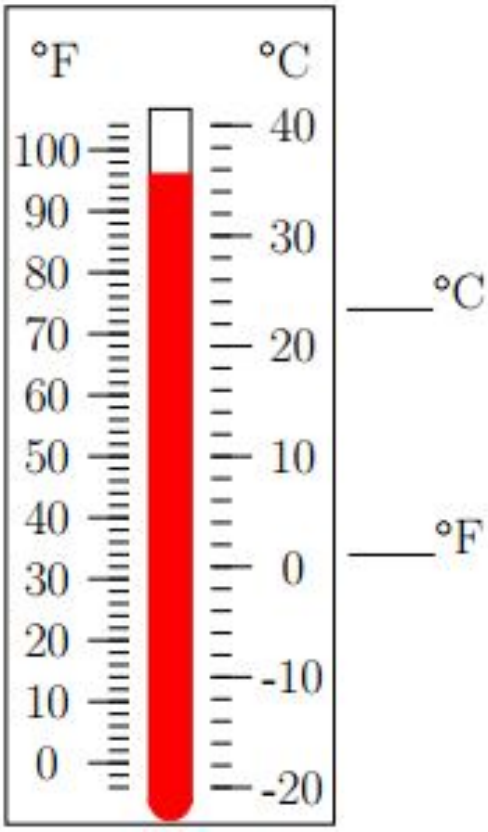
a) Energy

b) Temperature

c) Kinetic Energy

d) Thermometer

7.



Select the temperature in °C

a) 90°C

b) 100°C

c) 30°C

d) 40°C

8. In nature, heat always flows from a:

a) small object to a big object.

b) large object to a small object.

c) warm object to a cold object.

d) cold object to a warm object.

9. A measure of how hot or cold something is; specifically a measure of how fast particles in an object are moving.

a) Thermometer
b) Temperature
c) Absolute Zero
d) Specific Heat

10. What unit do you use to measure Energy?

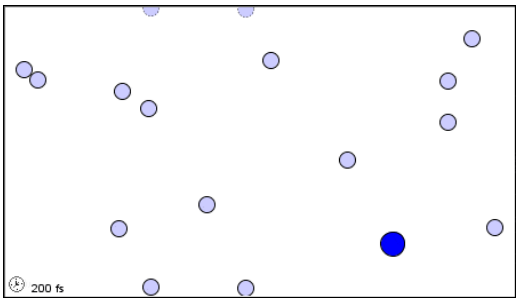
a) J
b) J/Kg ºC
c) ºC
d) Kg

11.

There are four cups of hot cocoa. The cup sizes are shown. The temperature of the cocoa in each cup is 25 degrees celsius. Which cup has the MOST Heat?

a) Small cup (Tall)
b) Large cup (Trenta)
c) All three are the same temperature so they have same heat

12.



What would be the effect on the particles if more heat is supplied to the system?

a) They would stop moving
b) There would be no effect
c) They would slow down
d) They would speed up

13. If I heat up 2 pans of water one has 100 mL in it and one has 1000mL. Which one heats up the fastest?

a) They both heat up at the same speed
b) 100 mL
c) They cool down.
d) 1000 mL

14.

There are four cups of cold cocoa. The cup sizes are shown. The temperature of the cocoa in each cup is 25 degrees celsius. Which cup will has the most temperature?

a) All four are the same temperature

b) Large cup (Trenta)

c) Small cup (Tall)

Answer Keys

1. d) heat
2. c) only from warm objects to colder ones
3. c) heat from your hand moves into the cold substance.
4. a) The heat energy from your friend's hand transferred to your hand through conduction.
5. c) they both have an equal temperature
6. d) Thermometer
7. d) 40°C
8. c) warm object to a cold object.
9. b) Temperature
10. a) J
11. b) Large cup (Trenta)
12. d) They would speed up
13. b) 100 mL
14. a) All four are the same temperature
